

Artificial Intelligence Check or No

Work in your group to decide whether each item or scenario involves Artificial Intelligence (AI) or not. Check the true scenarios.

A calculator that can solve math problems when you input them.	A microwave oven that automatically adjusts cooking time based on the food's weight.	A service like Netflix recommending movies and shows based on your viewing habits.
A game that adjusts its difficulty level based on how well you play.	A computer program that can recognize and understand human speech.	A dog that can learn tricks and respond to commands from its owner.
A plant that grows taller when it receives sunlight and water.	A GPS device that provides directions based on real-time traffic data.	A bicycle that moves when you pedal it.
A traffic light that changes colors automatically based on sensors detecting traffic flow.	A book that tells a story when you read it.	A robot that can vacuum the floor without being controlled by a person.

Discussion Questions:

- How many scenarios were related to Ai?
- State your reason(s) for each selection made?
- Can you state which AI technology it could be? eg. facial recognition
