Creating a Bar Graph of Passenger Numbers

AI tracks the number of passengers on buses at different times. Here are the passenger numbers for different times of the day:

7:00 AM: 50 passengers

9:00 AM: 30 passengers

12:00 PM: 40 passengers

3:00 PM: 35 passengers

6:00 PM: 55 passengers

- Draw a bar graph with the times on the horizontal axis and the number of passengers on the vertical axis.
- Label each bar with the corresponding number of passengers.

- At what time are there the most passengers? _____
- At what time are there the least passengers? _____
- How can AI use this information to improve public transportation?
